Product Description

K550L-Rehabilitation Exercise Treadmill, Adjustable Walking And Running All-In-One Machine For Middle-Aged And Elderly People

A new type of fitness tool for silver haired people, with a professional low-speed of 0.5 kilometers per hour, which is equivalent to taking two steps from counting to four, suitable for elderly people with poor legs and feet. The armrest area has been upgraded to a fully enclosed design, doubling the sense of security and making it more comfortable to exercise, making it suitable for the elderly. A safety assistive belt to protect users from accidents while running and assist in walking backwards. Adopting a silent energy-saving motor, the low-speed high-power rehabilitation is smoother and more stable than 80% of the market, with a noise level of less than 60DB. The 6 shock absorbers on the base are in direct contact with the ground, which can cushion pressure and increase friction to prevent the treadmill from sliding and avoid scratching the floor. The running board adopts nanotechnology with three layers of protection, effectively absorbing frictional static electricity, making the feet soft and comfortable like touching a beach, and protecting joints such as knees from sports injuries. Precision steel quality, not afraid of heavy pressure, stable thickened steel pipe, tough, solid and more stable load-bearing, carrying the dream of elderly rehabilitation. The control adopts a one button control design, and operations such as on/off/speed adjustment settings are concentrated on this button. Short pressing, long pressing, and rotating are respectively used to achieve different functions.
